AI-COACHING

INTERVENE

ASSESSMENT OF WORK READINESS:

The world-leading AWR is an academically-validated prescriptive analytic tool. The 3-minute survey informs which coaching principles work with each jobseeker. It allows the right intervention, at the right time for the right jobseeker.

KPI SCORE:

A very refined insight into jobseekers' level of commitment and identifies relatively small, but crucial, changes in attitude, circumstances and work readiness. A jobseeker might score 42 but 6mths later, 46. Whilst this change is too small to be picked up in the AWR's 5 segments, coaches will be able to precisely track changes and take appropriate action and affirmation. This measure of progress interests the govt.

ALGORITHM-INFORMED COACHING

The AWR can now be data-mined to provide coaches with the *exact* eroders and builders of a jobseeker's commitment to employment. Three or four specific questions that *must* be addressed in one-to-ones are provided to coaches.

INTERVENE:

From stage-matched interventions that increase outcomes by 42%, to contextualised training in mental toughness, well-being and resilience techniques. We can upskill your staff to improve their lives, and the lives of others.
